DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 7, 8, 10, 13 and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically the claim limitation "capable of" fails to distinctly point out what the function the claimed invention performs. The language capable of provides for the ability to perform a function thus is not definite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Schopfer et al. (United States Patent 5,636,273), hereinafter referenced as Schopfer.

Regarding **claim 1**, Schopfer discloses an integrated ring detection circuit and power cross detection circuit. In addition, Schopfer discloses a method for ring-trip detection in a line card, comprising: using an analog-to-digital converter for processing voice signal; using the analog-to-digital converter for DC feed control; receiving a ringing control signal; transmitting a ringing signal to a subscriber line in response to the

Art Unit: 2614

ringing control signal; receiving a portion of the ringing signal from the subscriber line; converting the portion of the ringing signal to a digital signal using the digital-to-analog converter; and providing a ring-rip indication in response to the digital signal, as disclosed at column 4, line 6-38 and exhibited in figure 4.

Regarding **claim 2**, Schopfer discloses everything claimed as applied above (see claim 1), in addition, Schopfer discloses wherein the ringing signal comprises an AC signal, as disclosed at column 4, line 6-38 and exhibited in figure 4.

Regarding **claim 3**, Schopfer discloses everything claimed as applied above (see claim 1), in addition, Hein discloses further including terminating the ringing signal in response to the ring-trip indication, as disclosed at column 4, line 6-38 and exhibited in figure 4.

Allowable Subject Matter

Claims 9 and 18-24 are allowed.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
